INSULATED CONNECTION BOOT & HOOK-UP KIT

- Makes for easy torch hook-up
- Virtually eliminates the possibility of arcing when contacting electrically hot parts

IMPROVED CARBON-ARC TORCH CABLE BOOT DESIGN

FEATURES & BENEFITS

- **Patented two-piece boot design**
Molded from a hard nylon reinforced fiber polymer made to withstand the substantial abuse in shop and field applications
- **Helps prevent accidental arcing**
No chance of the “boot” pulling away from the power connection as seen with prior “boot” design
- **Ease of replacement in the field**
Threaded screws holds the two halves together and can be loosened with a standard straight blade screwdriver
- **Available in two (2) different molded “boot” housing configurations**

Conventional Boot (Part No. 94-105-032)

- Accepts one 4/0 welding cable from the power supply and one 3/4” (19 mm) diameter air hose assembly providing current and compressed air

Quick-Connect Hook-Up Kit (Part No. 94-463-046)

- Twist lock-style power connection and air hose extending from the rear of the torch cable. This option allows the operator to connect or disconnect the incoming power lead and air line quickly and easily

GOUGING TECHNIQUES FOR SPECIFIC MATERIALS

CARBON STEEL & LOW ALLOY STEEL, SUCH AS ASTM A514 & A517

Use DC electrodes with DCEP (electrode positive). AC electrodes with an AC transformer can be used, but for this application, AC is only half as efficient as DC.

STAINLESS STEEL

Use DC electrodes with DCEP (electrode positive). AC electrodes with an AC transformer can be used, but for this application, AC is only half as efficient as DC.

CAST IRON INCLUDING MALLEABLE AND DUCTILE IRON (NODULAR)

Use 1/2" (12.7 mm) or larger diameter CCDC electrodes at the highest rated amperage. Use an angle of 70° off the workpiece and the depth of gouge should not exceed 1/2" (12.7 mm) per pass.

COPPER ALLOYS (COPPER CONTENT 60% AND UNDER)

Use CCDC electrodes with DCEN (electrode negative) at the electrode's highest amperage rating.

ALUMINUM BRONZE AND ALUMINUM NICKEL BRONZE (NAVAL PROPELLER ALLOY)

Use CCDC electrodes with DCEN (electrode negative) at the electrode's highest amperage rating.

NICKEL ALLOYS (NICKEL CONTENT OVER 80% OF MASS)

Use CCAC electrodes with AC current.

NICKEL ALLOYS (NICKEL CONTENT UNDER 80% OF MASS)

Use CCDC electrodes with DCEP (electrode positive) at the electrode's highest amperage rating.

PRINCIPLES OF AIR CARBON ARC

MAGNESIUM ALLOYS

Use CCDC electrodes with DCEP (electrode positive) and prior to welding, wire brush the groove.

ALUMINUM

Use CCDC electrodes with DCEP (electrode positive). You must brush with a stainless wire brush before welding. Electrode stick-out (length of electrode between torch and workpiece) should not exceed 3" (76.2 mm).

TITANIUM, ZIRCONIUM, HAFNIUM, AND THEIR ALLOYS

Do not cut or gouge to prepare for welding or remelting unless you mechanically remove the surface layer from the cut/gouge surface.

NOTE – If you preheat for welding, preheat for gouging

AUTOMATED GOUGING SYSTEM

The Arcair-Matic N7500 gouging system is highly productive for any metal fabrication operation where gouging and welding represents a large portion of the work schedule. This applies to almost all metals, including stainless steel, carbon, manganese, and chrome-moly steels.

DIGITAL LCD REMOTE PENDANT

- Ease of use – start/stop function, travel delay, electrode diameter
- Rough machining feature to stall the feed of the electrode to compensate for pitted area or out-of-round steel rolls, thereby maintaining the concentricity of the shaft/roll
- US Patent No. US 9101998 B2
- “Travel delay” function assures excellent groove geometry at the very beginning of the groove, thereby eliminating the need for a starting pad
- Shock-absorbent bumper
- Remote Pendant incorporates an emergency stop switch (E-Stop) when pressed in, will take precedence over any other “stop” signal and will drop out the engaged contactor in the power supply stopping the flow of current to the carbon electrode.

TORCH HEAD

- Small and lightweight while accepting the wide range of Arcair jointed Jetrods Copperclad DC carbons, 5/16" (7.9mm) through 3/4" (19.05mm)
- Can be oriented 360 degrees in any direction giving flexibility to fit the application

DIGITAL CIRCUITRY CONTROL BOX

- Redesigned digital circuitry control box
- A synergic mode ensures conformity to pre-determined, pre-selected groove depth and width specifications
- Can be used with CC/CV power supplies and the system utilizes the contactor in the welding power supply unit thereby eliminating the need for an external contactor used on prior models

TIPS FOR USING SLICE EXOTHERMIC CUTTING EQUIPMENT

TIPS FOR CUTTING

Cutting procedures will vary from job to job. Study the cutting rates chart for specific cutting speeds.

Normal cutting is done by using a drag technique. Once the rod is in contact with the piece to be cut, drag the rod in the direction of the cut. If the operator can't see the kerf, the speed of cut is too fast. If the rod is being used too rapidly the progress of the cut is too slow and the rod is being used without cutting. REMEMBER, the cutting rods consume as long as the oxygen is flowing. Maintain the proper travel speed at all times. NOTE: Use a sawing motion when material to be cut is thicker than 1-1/2 to 2 inches to ensure a complete melt through.

Use a smooth motion to complete the cut. Be careful not to hit nearby material with the rod when cutting in "close quarters." After completing the cut, release the oxygen control lever in the handle. THE CUTTING ROD WILL CONTINUE TO BURN AS LONG AS OXYGEN IS SUPPLIED. Hold the torch safely away from you until the rod cools.

TIPS FOR PIERCING SURFACES

The SLICE Torch can be used to pierce solids. Special procedures must be used when piercing. When piercing, use a collet extension (and shield). This extension adds life to the torch and hand shield, and greatly improves operator safety and comfort. Always hold the torch at arm's length and wear plenty of protective clothing, eye and ear protection. Cutting rods can get stuck inside the pierced hole. If possible, remove the cutting rod from the hole before releasing the oxygen lever.

With any thermal cutting equipment blowback is most likely to occur when the user is piercing holes. Cutting rods may burn unevenly. Slowly swirl the cutting rod as it enters a pierced hole. Cutting rods may burn out on the sides. Correct the problem by removing the cutting rod from the pierce point, shut the oxygen off, and replace the cutting rod.

To pierce follow these steps:

- Strike cutting rod on striker.
- Hold torch at arm's length.
- Keep the cutting rod at a 90° angle (perpendicular) to the pierce point.
- Slowly push cutting rod in at pierce point until you're at proper depth or until you've achieved burn through.

The pierce procedure is also used to cut concrete. By piercing a series of holes where a user wants to cut concrete, the concrete becomes easier to fracture. This helps reduce the time it would take to actually cut the concrete.

OXYGEN USAGE

This cutting process uses standard industrial grade oxygen to support the exothermic reaction and to remove the molten metal. All SLICE equipment uses standard oxygen fittings. The most commonly recommended operating pressure is 80 psi. Applications such as cutting material sections 3" and thicker might require higher operating pressures. Pressures as low as 40 psi have been used to perform operations such as washing off rivet heads and scarfing out small cracks for repair.

The oxygen consumption rate for the SLICE cutting rods at 80 psi is 7 to 7.5 cfm for the 1/4" (6.35 mm) diameter cutting rods and 11 to 12 cfm for the 3/8" (15.87 mm) diameter cutting rods. This rate will vary if a different operating pressure is used.

ROD BURNTIME

Listed are the approximate burntimes for the various SLICE rod diameters and lengths:

1/4" x 22" (6.4 X 559 mm)	40 - 45 seconds
1/4" x 44" (6.4 X 1118 mm)	80 - 90 seconds
3/8" x 18" (9.5 X 457 mm)	30 - 35 seconds

APPLICATION DATA

The best techniques for the SLICE equipment will change from job to job. The enclosed charts present the results of extensive testing of the SLICE Torch. Four things contribute to good cutting:

- 1) Electrical current.
- 2) Type of material being cut.
- 3) Environmental conditions.
- 4) Experience of the operator(s).

These data result from studies of the first two (2) items in this list. Since data were collected in a LABORATORY, actual results obtained will vary because of changes in the environment. Too, these tests were conducted by highly experienced users. The way in which you use the SLICE Torch will also cause your results to vary.

In any application, some adjustments in operating conditions are necessary. The charts are presented only as a guideline. Results will vary. You can approximate these results by using the data presented as a starting point, then adjusting for your job.

Here is a sample of some cutting rates that can be obtained using the SLICE Equipment. Cutting rates in this chart were obtained using 80 PSI oxygen pressure, battery ignition (no power cutting) and 1/4" x 22" (356 x 559 mm) cutting rods. These cutting rates will vary when using different rods, when cutting with power or using a different oxygen pressure. This chart does not represent all materials SLICE will cut nor all thicknesses used in fabrication. When cutting composite materials or metals not listed, locate the listed type that most closely matches the metal to be cut. This information is only meant as a reference to the efficiency and versatility that a user can realize using the SLICE Equipment.

CUTTING RATES

Material Being Cut	Thickness		Cut/in Rod		Cut Speed	
	in.	cm	in.	cm	in/min	cm/min

ESAB will determine whether to have the Products returned for inspection and repair or handled in some other manner (for example: shipping replacement Products "no charge" or issuing credit). Credit for Welding Equipment/Automated Cutting Systems may be subject to a depreciation charge based on length of time the Products were in service.

Written approval in the form of a Return Authorization form ("RA") will be issued if Purchaser is to return Products for repair or replacement. **UNDER NO CIRCUMSTANCES ARE ANY PRODUCTS TO BE RETURNED WITHOUT PRIOR WRITTEN AUTHORIZATION FROM ESAB.** A copy of the RA must accompany the return shipment of the Products to ESAB, and the Products must be received within 30 days of issuance of the RA. Any RA remaining open after 30 days will be cancelled, and the Purchaser will be billed for any "no charge" replacement Products supplied. Any Products subsequently returned against a cancelled RA will be returned to the Purchaser freight collect.

If a returned Product is determined to have failed for reasons other than defects in materials or workmanship within the scope of the warranty policy or if the applicable warranty has expired, Purchaser will be contacted for disposition. If such a Product is to be returned to Purchaser, freight charges will be borne by Purchaser, and Purchaser also will be billed for any "no charge" replacement Products supplied during the investigation of the complaint.

LIMITED WARRANTY: ESAB® warrants to the party purchasing Products directly from ESAB or from an Authorized Distributor of ESAB ("Purchaser") that those products listed in the Warranty Period section below ("Products") will be free of defects in workmanship or material for the relevant period specified in the Warranty Period section below beginning on the date that the Products are delivered to the Purchaser. If the Purchaser is buying Products from a party expressly authorized by ESAB in writing to sell ESAB Products (an "Authorized Distributor") rather than from ESAB directly then, notwithstanding the foregoing or anything to the contrary herein, in no event shall the warranty period extend more than the time stated in the Warranty Period section below plus 1 year from the date ESAB delivered the Product to the Authorized Distributor. To the extent that any Product identified herein incorporates parts and materials manufactured by ESAB and parts and materials manufactured by third parties, ESAB makes the warranties set forth in this Limited Warranty section only with respect to the parts and materials of the Products manufactured by ESAB. ESAB's warranty on any products that are not manufactured by ESAB and any parts and materials incorporated into Products that are not manufactured by ESAB is limited to extending to Purchaser any warranty offered by the original manufacturer with respect to that product, part or material to the extent that the warranty is assignable. Should any failure to conform to this warranty appear within the time period applicable to the ESAB Products as stated in the Warranty Period section below, ESAB shall correct such defects by suitable repair or replacement, at ESAB's sole option, of any components or parts of the Product determined by ESAB to be defective upon notification thereof and substantiation that the Product has been stored, installed, operated, and maintained in accordance with ESAB's specifications, instructions, recommendations and recognized standard industry practice, and not subject to abuse, misuse, neglect, alteration, accident, improper care and/or maintenance including lack of lubrication and protection from the elements and use of non-ESAB genuine parts (including consumables) that are a material cause of the Product defect. Such repair or replacement shall be performed by ESAB at no cost or expense to the Purchaser other than travel and accommodation costs and expenses for the ESAB Service Engineer should in-plant service be necessary.

EXCEPT AS SPECIFIED IN THIS LIMITED WARRANTY SECTION, ESAB HEREBY EXPRESSLY DISCLAIMS ANY AND ALL REPRESENTATIONS AND WARRANTIES, WHETHER WRITTEN OR ORAL, WHETHER EXPRESS OR IMPLIED, WHETHER ARISING BY CONTRACT, AT LAW, IN EQUITY, BY STRICT LIABILITY OR OTHERWISE, WITH RESPECT TO THE PRODUCTS, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTY OF MERCHANTABILITY, ANY WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, ANY WARRANTY AGAINST REDHIBITORY DEFECTS, AND ANY WARRANTY AGAINST PATENT, COPYRIGHT, TRADEMARK, TRADE NAME, TRADE SECRET INFRINGEMENT AND ANY OTHER TYPE OF INTELLECTUAL PROPERTY RIGHT INFRINGEMENT UNDER THE LAWS OF ANY NATION, INCLUDING, WITHOUT LIMITATION, THE LAWS OF THE U.S. THIS WARRANTY BECOMES INVALID IF REPLACEMENT PARTS, COMPONENTS OR ACCESSORIES NOT MANUFACTURED BY ESAB ARE USED WHICH MAY IMPAIR THE SAFETY OR PERFORMANCE OF ANY ESAB PRODUCT OR ARE A MATERIAL CAUSE OF THE MALFUNCTION OR POOR PERFORMANCE (OR DAMAGE TO) THE EQUIPMENT. THIS WARRANTY IS INVALID IF THE PRODUCT IS SOLD BY ANY PARTY OTHER THAN ESAB OR AN AUTHORIZED DISTRIBUTOR.

EXCEPTIONS TO LIMITED WARRANTY: Notwithstanding the foregoing or anything to the contrary herein, the warranty described in the Limited Warranty section above shall not apply to:

1. ESAB Filler Metals Products whose defect is derived from the filler metal selection or from the welding operations, which are the sole responsibility of the Purchaser and may have an effect on the Product's performance;
2. ESAB Automatic Cutting Machine Products or components thereof that have been subject to misuse or accident, or improper installation, maintenance or application nor to any parts which are subject to normal wear or deterioration such as lenses, fuses, lamps, scrapers, electrodes, shunts, pump impellers, pump casings for waterjet, cutting nozzle and other consumable type Products;

3. Routine mechanical, electrical and electronic adjustments made to ESAB Automatic Cutting Machine Products or components thereof such as are described and explained in the instruction manuals furnished with the Products (such adjustments are the responsibility of the Purchaser);
4. Electrical or electronic parts of ESAB Automatic Cutting Machine Products damaged by improper voltage supplies, improper electrical connections to the equipment or improper grounding techniques.

For ESAB Automatic Cutting Machine Products only:

1. Freight charges after the installation period or 30 days from the shipment date of the ESAB Automatic Cutting Machine Products, whichever comes first, for parts replaced under warranty are the responsibility of the Purchaser; and
2. Any and all warranties on such ESAB Automatic Cutting Machine Products are automatically void if arc welding is performed on any part of the ESAB Automatic Cutting Machine Products without the express approval of an authorized ESAB representative.

For ESAB Filler Metals Products only:

1. In case of warranty breach, ESAB will have the right to exchange, or accept the return by the Purchaser of existing inventory of such defective ESAB Filler Metals Products and issue credit at the price paid by the Purchaser, plus any shipping costs incurred by the Purchaser in connection with the purchase of such ESAB Filler Metals Product after ESAB has had the opportunity to analyze the claim.

LIMITATION OF LIABILITY: ESAB's total liability to Purchaser and any third parties with respect to the Products (whether as to Products delivered or for delayed delivery or for non-delivery of Products and whether the claim is based on warranty, on contract, on negligence, on tort, on strict liability, on Products defects or otherwise), shall not exceed the amount of the purchase price of the Products with respect to which the claim is made, and ESAB is hereby released from any claim in excess of the aggregate purchase price of those Products upon which the claim is based. IN NO EVENT SHALL ESAB BE LIABLE TO PURCHASER OR ANY THIRD PARTIES FOR ANY CIRCUMSTANTIAL, CONSEQUENTIAL, CONTINGENT, EXEMPLARY, INCIDENTAL, INDIRECT, LIQUIDATED, MATERIAL, PUNITIVE, SPECIAL, SPECULATIVE OR OTHER DAMAGES, INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOST PROFITS OR REVENUES, LOST BUSINESS OR BUSINESS INTERRUPTIONS ARISING IN ANY MANNER IN CONNECTION WITH THIS OFFER AND THE SALE, DELIVERY AND USE OF THE PRODUCTS. Without limiting the generality of the foregoing, Purchaser assumes any and all risks and liability for the results obtained by use of the Products in combination with any other equipment or materials or in the practice of any process, whether in terms of operation costs, general effectiveness, success or failure. The remedies of the Purchaser set forth herein are exclusive.

ESAB limited warranty shall not apply to: Consumable Parts for MIG, TIG, Plasma welding, Plasma cutting and Oxyfuel torches, O-rings, fuses, filters or other parts that fail due to normal wear.

- * Warranty repairs or replacement claims under this limited warranty must be submitted by an authorized ESAB repair facility within thirty (30) days of the repair.
- * No employee, agent, or representative of ESAB is authorized to change this warranty in any way or grant any other warranty, and ESAB shall not be bound by any such attempt. Correction of non-conformities, in the manner and time provided herein, constitutes fulfillment of ESAB's obligations to purchaser with respect to the Product.
- * This warranty is void, and seller bears no liability hereunder, if purchaser used replacement parts or accessories which, in ESAB's sole judgment, impaired the safety or performance of any ESAB Product. Purchaser's rights under this warranty are void if the Product is sold to purchaser by unauthorized persons.
